IndustriOS Software introduces Quality for INDUSTRIOS by uniPoint to address small and mid-size manufacturers quality system needs.

Oakville, Ontario, March 12, 2009 – IndustriOS Software joined with uniPoint Software to offer an integrated system, Quality for INDUSTRIOS by uniPoint, to address manufacturers' need to manage the life cycle of quality control and continuous improvement for a multitude of quality standards such as: ISO 9001, ISO 13485, ISO/TS 19649, AS9100 and FDA 21 CFR Part 11 & Part 820 Compliance.

"IndustriOS Software is excited to partner with uniPoint Software to offer an integrated solution to manage the quality process while cost effectively leveraging the data already in the INDUSTRIOS manufacturing and operations suite. Our mission is to offer solutions that will help improve our customers bottom line, and with the reduction in quality costs achieved using Quality for INDUSTRIOS by uniPoint, we continue this tradition." Renato DeGasperi, President of IndustriOS Software, Inc.

Quality for INDUSTRIOS by uniPoint enables INDUSTRIOS users to create, link, communicate, track and manage the life cycle of quality activities and documents through various modules.

Non-Conformances manages the tracking of customer, vendor and internal non-conformances including costs, status, user assignment, non-conformance analysis, and both detailed and summary reporting.

Corrective and Preventative Action tracks the continuous improvement processes, with links back to the non-conformances, and tracks the costs and the impact of corrective and preventive actions.

Document Control allows you to "go green" by replacing unnecessary and costly paper files with a management and retrieval system to centralize and control your documents. This is an invaluable tool for audits and inspections.

Key Indicators Dashboard allows you to quickly view quality metrics of your choosing from a selection of hundreds of pre-loaded metrics, or create your own.
